HIGHLIGHTS California's seasonally adjusted unemployment rate for October was 6.0 percent, up from the 5.9 percent in September. A year ago, in October, the rate was 4.9 percent. During October in California, seasonally adjusted employment decreased by 18,000 over the month while unemployment increased by 15,000. The number of job losers decreased from 427,400 in September to 382,800 in October. The number of job leavers decreased by 10,900 during the month. The national civilian seasonally adjusted unemployment rate for October was 5.7 percent, unchanged from the 5.7 percent in September. (Figures 1-7).

Total nonagricultural wage and salary employment, not seasonally adjusted, increased by 64,000 from 12,823,700 in September to 12,887,700 in October. The largest increase in employment was in the government sector with a gain of 57,600 jobs most of which occurred in education. Other sectors that registered increases were trade with 12,800 additional jobs; services with 12,500; and finance, insurance and real estate with 400. After adjusting October's data for seasonality, employment grew in five of the eight major nonagricultural sectors. The largest gain was 7,000 jobs in services with very small increases in trade; transportation and public utilities; finance, insurance and real estate; and mining. The largest decrease in jobs occurred in government with 3,200, followed by construction and manufacturing with 700 each. Job losses in the manufacturing sector were spread throughout most of the components in durable goods; this marks the seventh consecutive month that seasonally adjusted employment in manufacturing has decreased. Since October 1989, total wage and salary employment, not seasonally adjusted, has increased by 225,200, a gain of 1.8 percent over the year. During September, average weekly earnings and average weekly hours worked in manufacturing increased to \$475 and 40.8, respectively. (Figures 8-11).

*Because of a relatively small sample, the monthly estimates for data in Table 2 do not always appear to reflect real labor market conditions. Therefore, these figures are a three-month moving average instead of monthly data. For example, July's data are an average of May, June, and July. August's data are an average of June, July, and August.
